

A3

Catherine Thomas

Concept Note

Food waste is a significant global issue with far-reaching environmental, economic, and social consequences. One of the major contributors to food waste is in shared accommodation settings like Paying Guest accommodations (PGs). The concept of a Food Waste Tracking Webpage for PGs aims to address this problem by creating a user-friendly platform that tracks and reports the amount of food waste occurring in PGs. This initiative not only promotes awareness among the residents about food wastage but also enables PG owners to make informed decisions to minimize waste. The Food Waste Tracking Webpage for PGs is a valuable tool in addressing the issue of food waste in shared accommodations. By promoting awareness, responsible consumption, and data-driven decision-making, it not only benefits PG residents and owners but also contributes to a more sustainable and environmentally conscious society. It will be developed as a responsive web application that would be displayed near the food counters at the PG. users can also access the platform via web browsers on their personal devices.
